

First, open your Finder from the dock.

In the Finder, navigate to Applications/Promethean/Activstudio3. If you see Shared folders in this location, then the resources are installed on your computer and we just need to change the path.

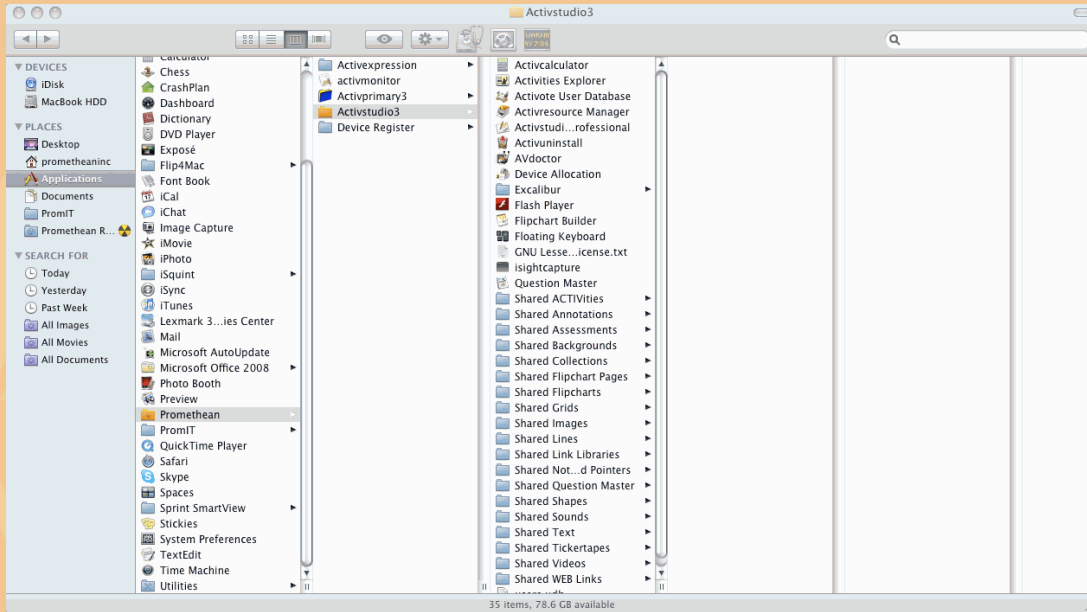

If you see Shared Activites, Shared Annotations, etc. in this spot, you can just change the path by following the directions on the next two pages.

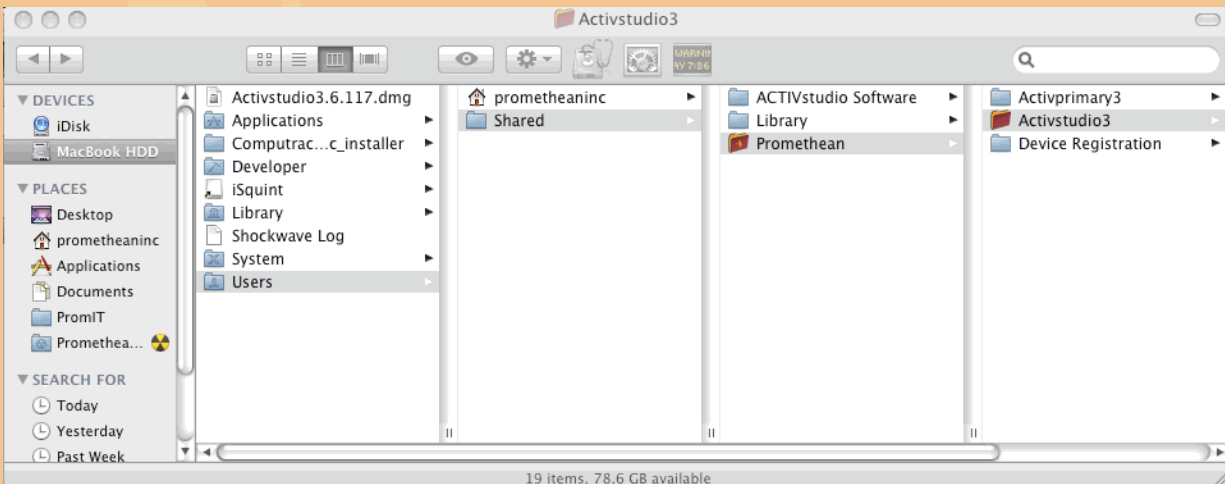

****If you do not see the Shared folders here, then make sure you installed Discs 2 and 3 when loading the software. After installing Discs 2 and 3, open your Resource Library from Activstudio to see if the shared resources are there. If you don't see them, open the Finder again and navigate to the folder above and complete the steps on the next two pages.*

Open two Finder windows and navigate to the following locations:

Applications/Promethean/Activstudio3

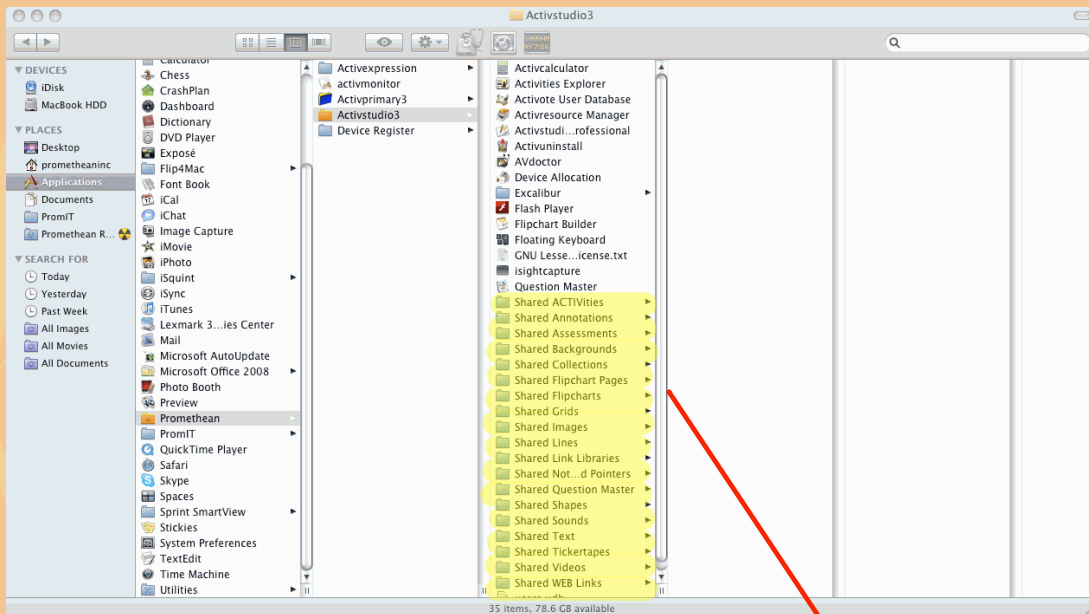

Users/Shared/Promethean/Activstudio

Move the Shared Folders and the users.udb file from the Applications folder into Users/Shared/Promethean/Activstudio. DO NOT move the Application files.

Applications/Promethean/Activstudio3

Users/Shared/Promethean/Activstudio3
